

TOWER FARMS

Professional

ANY PLANT, ANY SEASON, 8X THE GAINS!

THE ULTIMATE
FARMING
MACHINE FOR
COMMERCIAL
APPLICATIONS

*"Any Plant, Any
Season. 8x the Gains"*

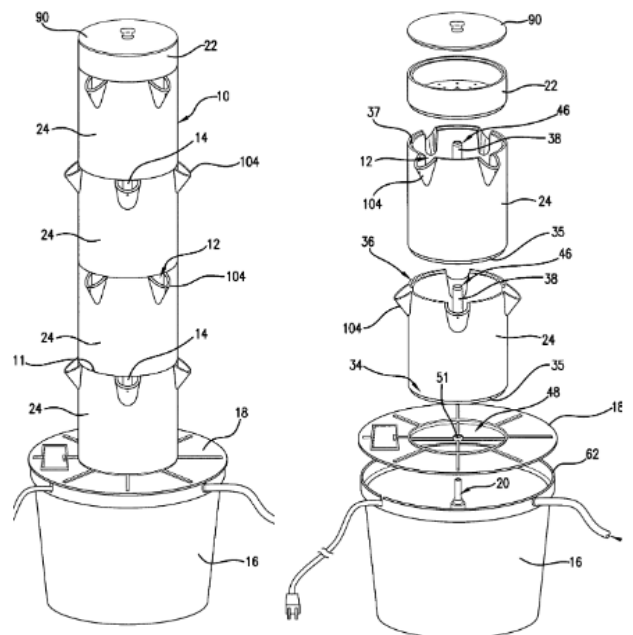

Tower farms

are a cutting-edge patented american farming technology that combines two methods of farming:

Vertical Farming is when crops are stacked on top of each other instead of being laid in a horizontal fashion.

“Aeroponics” is a soilless method of farming where the roots of the plants are actually hanging in the air 24/7.

Tower Farms

enables the crops get their nutrition from a specially formulated 100% Natural Mineral Solution called “TowerTonic”.

The main advantage of the TowerTonic solution is that the exact same mixture can be used to grow an extremely wide range of different plants, allowing for a hassle-free experience. Hydroponics for example, require a unique nutrient solution for every crop.

With this Technology, crops carry more

Nutrients than their organic siblings harvested through conventional means. They can grow larger in size, more aromatic, fresher tasting, and have more vibrant colors.

Due to the Density of the towers (up to 196 Plants per tower), Tower Farms save up to 80% in space compared to soil farming. Crops also use zero pesticides & chemicals due to the nature of the system, making them far fresher and more nutrient dense, hence *"Beyond Organic"*.

The Gains

Up to 80%
Space Savings

Saves up to
92% of water

Around 800%
More Yield

Any Plants
Regardless
of Season

No Chemical
Pesticides

Low Labor & No
Previous
Experience
Required

Versatility

Tower Farms grow at a temperature of 21 to 25 Celsius and a humidity not less than 40%. The Towers can therefore be placed anywhere, and crops grow regardless of season, climatic, or weather conditions, all with very little labor required.
